Installation Guidelines

1) Ensure there is adequate clearance and depth for the speaker to be mounted
2) Use the supplied template to mark out and cut the correct diameter hole
3) Drill four holes for the mounting screws
4) Separate the grille from the frame
5) Insert the speaker and grille frame and affix with the screws provided
6) Complete installation by replacing the grille into the grille frame

(see diagram on reverse side)

Warning: Do not drill mounting holes with speaker in place as this could allow drill shavings to damage the voice coil and void your warranty.

Ensure the audio system is turned off before making any connections to the amplifier, speakers or source unit. Failure to do so could result in permanent damage to the audio system.

When wiring the speakers ensure that the wire is protected from sharp objects and always use rubber grommets when wiring through metal panels. Ensure all terminals and connections are protected from the vehicle chassis and from each other as failure to do so could result in
permanent damage to the audio system.

When connecting the source unit/amplifier and speakers ensure you connect the positive and negative output wire from the source unit/amplifier to the corresponding speaker terminals. This will ensure the audio system will be in phase.
